

IN THE SPECIFICATION

Please amend the specification as follows:

Replace the paragraph on page 3, between lines 31-33 of the specification with the following:

Fig. 4 summarizes the standards used in the example of embodiment described. Among the various boxes shown, C1 to C16, certain boxes are ~~represented in gray~~ hatched to indicate the parts modified by the measures according to the invention.

Replace the paragraph on page 5, between lines 20-26 of the specification with the following:

If the analyzed syndrome of box K32 is not satisfactory, box K50 is proceeded to and the position (the operating time of the information MPL) is examined. If this position is all right, box K52 is proceeded to, where the series is validated, but the <<Uncertain>> mode is proceeded to. If this position is not all right, an examination is made in box K54 in which mode one is. If one is ~~not~~ in the <<Robust>> mode, the header is ignored, one

thinks that this is information (box K56). If one is in the
<<Uncertain>> mode, one remains there and rejects the series (box
K58).
